\*The mismatch between the injection and overdrawl for any block of time shall be met from the grid and shall be governed by UI charges (as notified by CERC, from time to time) or applicable tariff for that category, at that point of time, whichever is higher. However, mismatch would be calibrated by loading the T&D losses before working out the UI charges.

In this event of under-drawal by the Open-Access customer for any block of time, the same shall be governed by applicable tariff for that category, at that point of time, whichever is lower.
